

Elton Guilherme de Almeida Silva

Data Engineer | Azure certified: AZ900 and DP900 | Apache Spark | Python | SQL | Databricks | Docker | Linux | Git | Github

(83)98780-3349 João Pessoa/PB • elton-guilherme@hotmail.com • linkedin.com/in/elton-guilherme/

Summary

Microsoft AZ900 Certification | Microsoft DP900 Certification.

MBA in Big Data and Business Intelligence.

Development of Python products with Generative AI and Langchain for clients in various sectors (Banks, Public Sector, and Manufacturing).

Involvement in the development and maintenance of data pipelines with Pyspark (Databricks), SQL (Postgres, MySQL, and SQL SERVER) and Python in the Cloud Azure, using a hub-and-spoke architecture and Data Lake in Cloud Azure and Azure Data Factory as the orchestrator.

Acting as an internal monitor for Programming Logic and Algorithms with Python.

Involved in the development of data consumption pipelines from API using Azure Cosmos DB, Spark docker image, and docker compose with data persistence via terminal parameters (PowerShell / CMD).

Experience in developing pipelines in an Azure environment in the context of API data consumption, web scraping, local and cloud files, as well as data cleaning and treatment using Spark in the Databricks framework in Linux and Windows environments.

Development of Python applications for CRUD operations in SQL Server database using JDBC connections and object-oriented programming.

Development of end-to-end projects in an Azure Cloud environment using resources such as Storage Account, Data Factory, Key vault, Integration runtime, linked services, SQL Server, Cosmos DB, Power BI, and Metabase.

Development of Data Warehouse projects from requirement gathering and architecture, with table definition and modeling in SQL Server, creation of a star schema model with fact and dimension tables, treatment and cleaning in Databricks, and subsequent visualization in Power BI.

Professional Experience

Data Engineer - BlueShift Brasil

Since January/2022

As a Data Engineer, I have been working with,

Project: ETL and data pipelines:

- Developed data pipelines in Azure cloud, including the use of Data Factory for orchestration and the construction of a Data Lake with a hub-and-spoke architecture and loading into Azure SQL database via Databricks with PySpark.
- Database modeling and table creation, along with the development of a pipeline for the consumption and processing of data consumed via REST API in Databricks (PySpark), followed by persistence in Azure SQL database and visualization in Power BI.

Datafactory| Data Lake| Blob Storage | Pyspark| Database Modeling| Pipeline| REST API| SQL | Power BI | Architectural Medallion

Development of an application for reading forms and identifying images using Azure AI tools.

- Monitoring the project with a Kanban tool and analyzing the S-curve.
- Allocating resources and reallocating them as needed for the project. Simplifying the architecture, applying Scrum methodology, using risk matrix and Gantt and Trello diagrams.

Kanban | S-curve | Power BI | Overleaf.

Project: Registration Backend

- Consumption of API and ETL with Pyspark in Docker and use of Cosmos DB for storage with parameter usage via terminal.
- Development of backend for user input and data persistence in SQL Server and MySQL tables, using Python object-oriented and JDBC connection.

Pyspark | Docker | Cosmos DB | Python Object-Oriented | JDBC Connection | SQL Server | MySQL.

Project: Development of Chatbots

- Construction of applications with Chatbots, using the OpenIA Generative LLM of AI with the Python Langchain framework in the AzureOpenIA environment.
- In this project, I worked on document processing, preparation, ingestion, and containerization of the application, testing the technology locally and then deploying it to the Azure environment.

Generative AI | Python Langchain | Azure Cognitive Service | Docker | Azure Container Registry.

Courses

Unipê - João Pessoa University Center - MBA in Business Intelligence with Big Data (October 2021 – July 2023)

Academy Accreditation - Databricks Lakehouse Fundamentals

Academy Accreditation - Generative AI Fundamentals

Azure Data Engineer Associate (DP-203) Cert Prep: 1 Design and Implement Data Storage

Microsoft Certified: Azure Fundamentals

Azure Data Engineer Associate (DP-203) Cert Prep: 2 Design and Develop Data Processing

Foundation Getúlio Vargas MBA - Accounting, Auditing, and Financial Management (2011 - 2013)

Language

English – B2

Education

UNIESP University College, Bachelor's Degree in Accounting (2007 - 2011)
